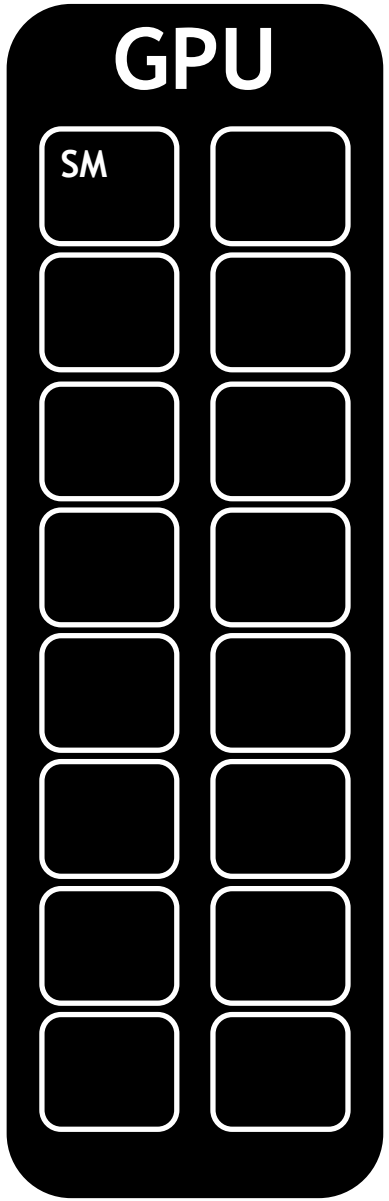
Streaming Multiprocessors

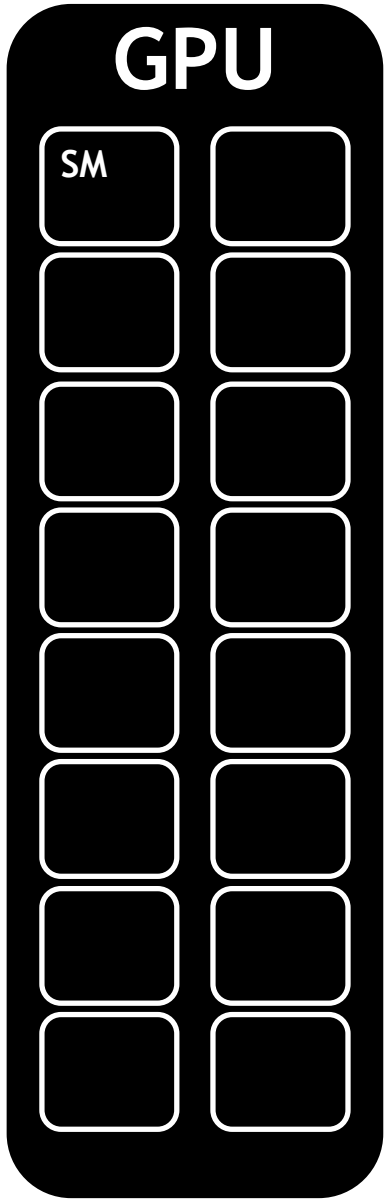
GPU

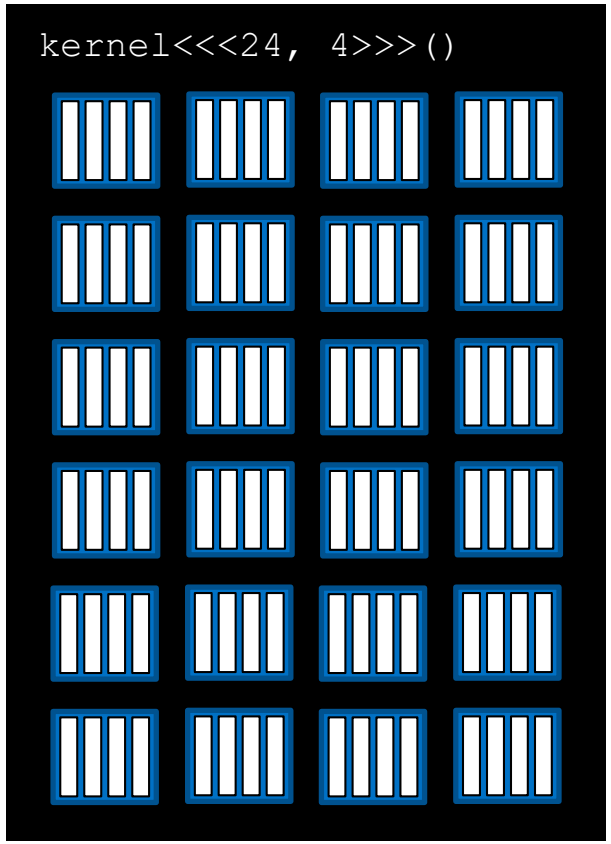
NVIDIA GPUs contain functional units called **Streaming Multiprocessors**, or **SMs**

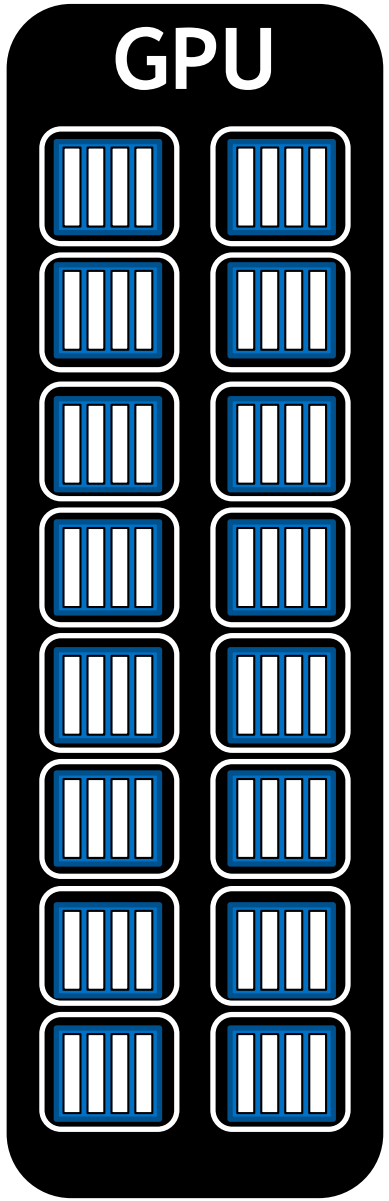


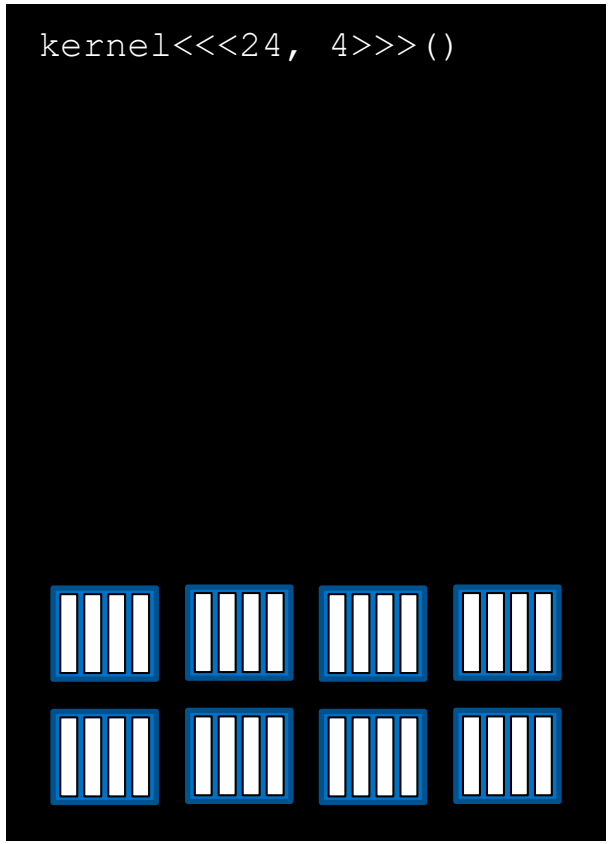
NVIDIA GPUs contain functional units called **Streaming Multiprocessors**, or **SMs**

Blocks of threads are scheduled to run on SMs

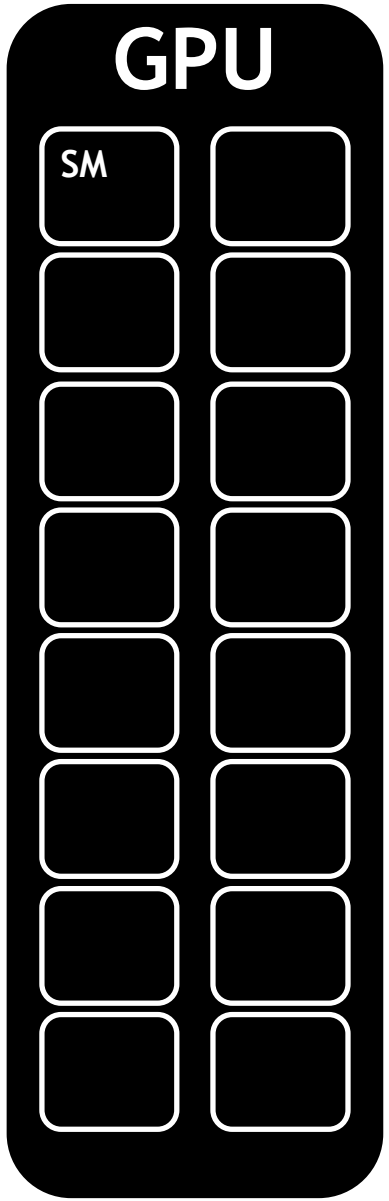


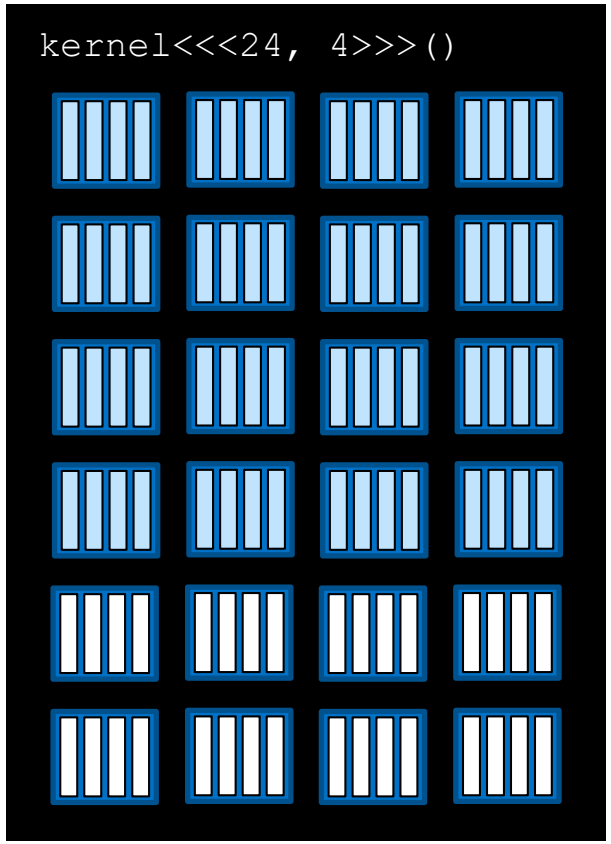




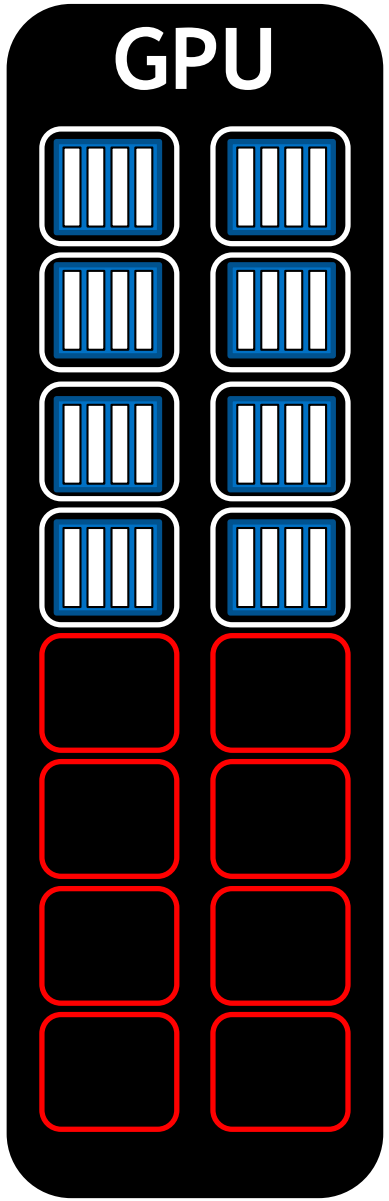


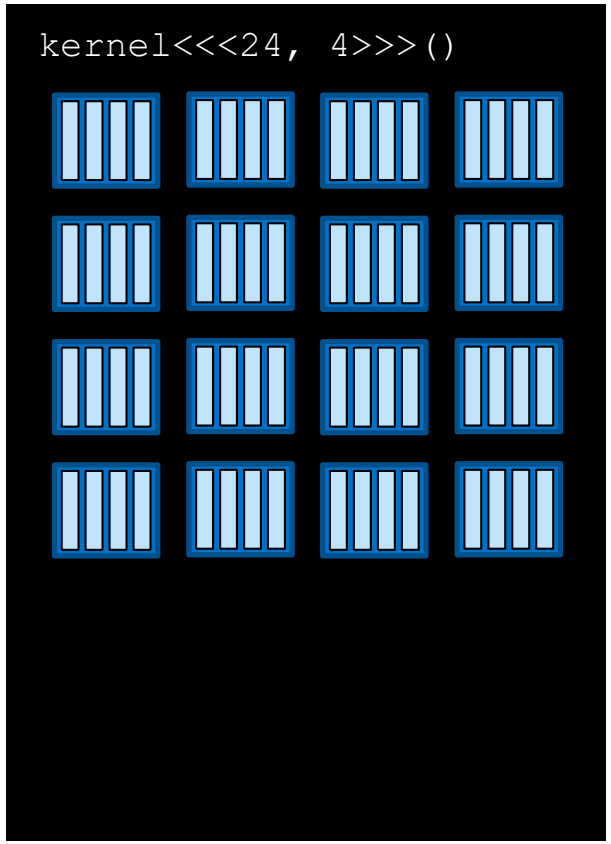
Depending on the number of SMs on a GPU, and the requirements of a block, more than one block can be scheduled on an SM



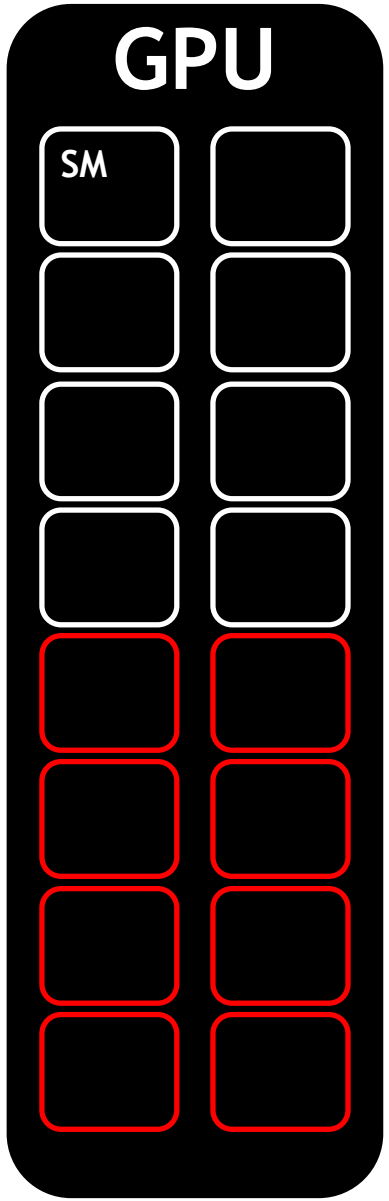


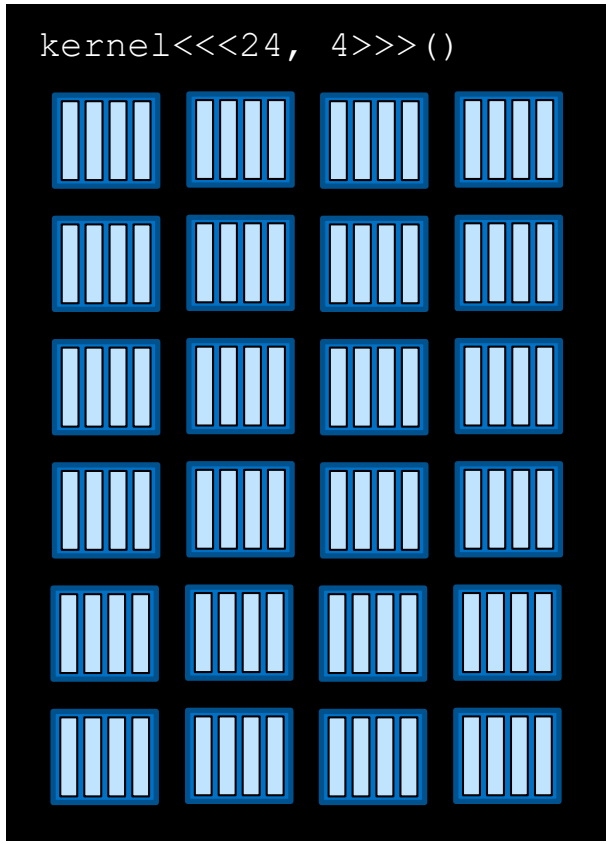
Depending on the number of SMs on a GPU, and the requirements of a block, more than one block can be scheduled on an SM





Grid dimensions divisible by the number of SMs on a GPU can promote full SM utilization





Here there are fallow SMs
